

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: **Ralph J. DeBerardinis, M.D., Ph.D.**

eRA COMMONS USER NAME (credential, e.g., agency login): **DEBERA**

POSITION TITLE: **Professor, Children's Medical Center Research Institute (CRI), University of Texas Southwestern Medical Center**

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.*)

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
St. Joseph's University	BS	05/1992	Biology
University of Pennsylvania	PhD	06/1999	Cell & Molecular Biology
University of Pennsylvania	MD	05/2000	Medicine
Children's Hospital of Philadelphia	Residency	06/2005	Pediatrics & Medical Genetics
Children's Hospital of Philadelphia	Fellowship	06/2007	Biochemical Genetics

A. Personal Statement. The primary research interest of the DeBerardinis laboratory is the role of altered metabolic states in human diseases, including cancer and inborn metabolic diseases in children. We have extensive experience measuring metabolic flux in vitro, in vivo and ex vivo. By using a combination of mass spectrometry and NMR spectroscopy, we have developed the ability to provide extremely sensitive, specific and comprehensive views of intermediary metabolism in biological systems. We have used these approaches to identify a number of novel regulatory mechanisms, and novel metabolic pathways that support the ability of tumor cells to produce macromolecules and sustain proliferation and viability. We are now using metabolic flux analysis to understand the full breadth of metabolic diversity in cancer, and are applying these data sets to understand the molecular determinants of metabolic pathway choice and metabolic vulnerabilities. These studies are complemented by in vivo analysis of metabolism in mice and patients, and by translational efforts designed to understand and exploit metabolic idiosyncrasies of tumor cells. Emerging work explores the utility of combining metabolic analysis with molecular imaging techniques to monitor metabolic states non-invasively and to discover the drivers of metabolic phenotypes in vivo. In inborn errors of metabolism, we use genomics and metabolomics to identify novel disease genes and develop therapies, including dietary modifications, to treat these conditions. My trainee history includes undergraduates, pre-doctoral students and post-doctoral scientists, most of whom have remained engaged in research after moving on from my lab.

B. Positions and Honors

Positions and Employment

09/1992-05/2000	MD/PhD student, The University of Pennsylvania, Combined-Degree Program
06/2000-06/2005	Resident, Pediatrics/Medical Genetics Program, The Children's Hospital of Philadelphia
07/2005-2007	Instructor and Attending Physician, Children's Hospital of Philadelphia
01/2008-08/2013	Assistant Professor of Pediatrics and Genetics, UT Southwestern
07/2011-2014	Director, Medical Genetics Residency Program, UT Southwestern
12/2011-08/2013	Assistant Professor, CRI, UT Southwestern
09/2013-08/2017	Associate Professor with tenure, CRI, UT Southwestern
09/2013-present	Division Chief, Pediatric Genetics and Metabolism, Dept. of Pediatrics, UT Southwestern
09/2013-present	Director, Genetic and Metabolic Disease Program, CRI, UT Southwestern
09/2017-present	Professor with tenure, CRI, UT Southwestern
09/2018-present	Investigator, Howard Hughes Medical Institute

Other Experience and Professional Memberships

2000 – present	Member, American Academy of Pediatrics
2002 – present	Member, American Society of Human Genetics
2004 – present	Member, United Mitochondrial Disease Foundation
2007 – present	Member, Society for Inherited Metabolic Disorders
2009 – present	Member, American Association for Cancer Research
2009 – present	Member, Society for Pediatric Research
2009 – present	Faculty, Genetics and Development Graduate Group, UT Southwestern
2009 – present	Faculty, Cancer Biology Graduate Group, UT Southwestern
2011 – present	Program Committee (Cellular and Molecular Biology Section, Metabolism and Cancer Subcommittee), American Association for Cancer Research
2012 – 2016	Editorial Board, <i>Oncogene</i>
2014 – present	Editorial Board, <i>Cancer Discovery</i>
2014 – present	Editorial Board, <i>EMBO Molecular Medicine</i>
2014 – present	Senior Editor, <i>Cancer & Metabolism</i>
2016 – present	Board of Reviewing Editors, <i>eLife</i>
2014 – 2018	Deputy Editor, <i>Molecular Case Studies</i> , Cold Spring Harbor Press
2015 – present	Keystone Symposia Study Group
2016	Steering Committee, AACR Cancer Progress Report
2019 – present	External Advisory Board, Rutgers Comprehensive Cancer Center

Honors

1994-2000	University of Pennsylvania Franklin Scholar (MD/PhD support)
1998	Roy G. Williams Award for research in the basic sciences, University of Pennsylvania
2003	Senior Resident Clinician Award, Children's Hospital of Philadelphia
2004-2006	University of Pennsylvania Medical Genetics T32
2007	Children's Hospital of Philadelphia Faculty Honor Roll
2008	Society for Inherited Metabolic Disorders, Neil Buist Award
2008	William K. Bowes, Jr. Award in Medical Genetics, Harvard-Partners Center
2008	President's Research Council Young Researcher Award, UT Southwestern
2008	Sowell Family Scholar in Medical Research, UT Southwestern
2011	Damon Runyon Cancer Research Foundation Clinical Investigator Award
2012	American Society for Clinical Investigation
2013	Joel B. Steinberg, M.D. Chair in Pediatrics
2015 – 2016	Chair, Metabolism and Cancer Section, 2016 American Association for Cancer Research Program Committee
2016	Faculty Scholar, Howard Hughes Medical Institute

2016	<i>D Magazine</i> , Best Doctors and Pediatric Subspecialists
2017	Outstanding Investigator Award, National Cancer Institute, NIH
2017	Inaugural Robert L. Moody, Sr. Faculty Scholar
2018	Investigator, Howard Hughes Medical Institute
2018	Edith and Peter O'Donnell Award in Medicine, The Academy of Medicine, Engineering and Science of Texas
2019	Post-doctoral mentoring award, UT Southwestern Medical Center
2020	Association of American Physicians

C. Contributions to Science

1. Metabolic reprogramming in cancer cells: Regulated alteration of metabolic pathways – also known as metabolic reprogramming – is considered to be a biological hallmark of malignancy, a consequence of tumorigenic mutations, and a source of novel therapeutic targets in cancer. The most commonly held view of cancer metabolism, inherited from nearly 100 years of research since the seminal work of Otto Warburg in the 1920s, is that cancer cells require elevated glycolysis and suppressed mitochondrial metabolism to achieve rapid proliferation. This view discounts the importance of mitochondrial metabolism in producing macromolecular precursors for biosynthesis and growth. For over ten years, my research has focused on how mitochondrial metabolism and other pathways support growth in both transformed and non-transformed cells. This has led to a renewed interest in the mitochondria as biosynthetic organelles, in the metabolic flexibility of the tricarboxylic acid cycle and other mitochondrial pathways to meet the biosynthetic demands of rapid cell proliferation, and the versatility of glutamine in providing carbon and nitrogen for growth and survival. I was the primary or corresponding author on the following papers:

- a. Cheng T, Sudderth J, Yang C, Mullen AR, Jin ES and DeBerardinis RJ. Pyruvate carboxylase catalyzes an alternative metabolic strategy allowing tumor cells to escape glutamine dependence. *PNAS USA* 108: 8674-8679 (2011). PMID 21555572 PMC 3102381.
- b. Mullen AR, Wheaton WW, Jin ES, Chen P-S, Sullivan LB, Cheng T, Yang Y, Linehan WM, Chandel NS and DeBerardinis RJ. Reductive carboxylation supports growth in tumour cells with defective mitochondria. *Nature* 481:385-388 (2011). PMID 22101431 PMC 3262117.
- c. Jiang L, Shestov A, Swain, P, Yang C, Parker SJ, Wang QA, Terada LS, Adams ND, McCabe MT, Pietrak B, Schmidt S, Metallo, CM, Dranka BP, Schwartz B and DeBerardinis RJ. Reductive carboxylation supports redox homeostasis during anchorage-independent growth. *Nature* 532:255-288 (2016).
- d. Huang F, Ni M, Chalishazar MD, Huffman KE, Kim J, Cai L, Shi X, Cai F, Zacharias LG, Ireland AS, Li K, Gu W, Kaushik AK, Liu X, Gazdar AF, Oliver TG, Minna JD, Hu Z, DeBerardinis RJ. Inosine monophosphate dehydrogenase dependence in a subset of small cell lung cancers. *Cell Metabolism* 28:369-382 (2018). PMCID: PMC6125205

2. Understanding the metabolism of intact tumors. The vast majority of cancer metabolism research to date has focused on culture models of cancer cell growth rather than on intact tumors. Although research in cancer cell biology has produced a wealth of information about how metabolic pathways and dependencies are regulated, they have done little to answer what we consider to be the key question in this field: which metabolic pathways are at work in bona fide tumors in living subjects? We were among the first groups to develop efficient methods to introduce intra-operative nutrient tracers (e.g. isotope-labeled glucose and glutamine) to mice and humans with cancer. Our work has led to the following major findings: 1) intra-operative isotope infusions are safe, practical, and highly informative in mice and humans; 2) as predicted from our work in cultured cancer cells, aggressive tumors display oxidative metabolism in their mitochondria; and 3) glucose is only one of several nutrients oxidized in the tumor mitochondria. This latter observation has opened up several new avenues of investigation for us and others. Key findings are reported in:

- a. Marin-Valencia I, Cho S, Yang C, Mashimo T, Yang X-L, Rajagopalan KN, Vemireddy V, Cai L, Good L, Tu BP, Hatanpaa K, Mickey BE, Pascual JM, Maher EA, Malloy CR, *DeBerardinis RJ and *Bachoo RM. Analysis of tumor metabolism reveals mitochondrial glucose oxidation in genetically diverse, human glioblastomas in the mouse brain in vivo. *Cell Metab* 15: 827-837 (2012).
- b. Hensley CT, Faubert B, Yuan Q, Lev-Cohain N, Jin E, Kim J, Jiang L, Ko B, Skelton R, Loudat L, Wozzak M, Klimko C, McMillan E, Butt Y, Ni M, Oliver D, Torrealba J, Malloy CR, Kernstine K,

Lenkinski RE and DeBerardinis RJ. Metabolic heterogeneity in human lung tumors. *Cell* 164: 681-694 (2016).

- c. Faubert B, Li KY, Cai L, Hensley CT, Kim J, Zacharias LG, Yang C, Do Q, Doucette S, Burguete D, Li H, Huet G, Yuan Q, Wigal T, Butt Y, Ni M, Torrealba J, Oliver D, Lenkinski RE, Malloy CR, Wachsmann JW, Young JD, Kernstine K, DeBerardinis RJ. Lactate metabolism in human lung tumors. *Cell* 171:358-371 (2017).
 - d. Tasdogan A, Faubert B, Ramesh V, Ubellacker JM, Shen B, Solmonson A, Murphy MM, Gu Z, Gu W, Martin M, Kasitinon SY, Vandergriff T, Mathews TP, Zhao Z, Schadendorf D, DeBerardinis RJ, Morrison SJ. Metabolic heterogeneity confers differences in melanoma metastatic potential. *Nature* 577(7788):115-120 (2020).
3. **Novel methods in non-invasive assessment of metabolism.** Although ¹⁸F-FDG-PET is widely used to assess tumor glucose uptake, this technique provides at best a pinhole view of the metabolic network and provides no information about either downstream metabolic of glucose or of the role of alternative nutrients. Many other metabolic imaging techniques, including proton magnetic resonance spectroscopy ¹³C hyperpolarization and the use of alternative PET agents are potentially available to interrogate the metabolic state in cancer and other diseases. We have been highly engaged in developing and deploying new technologies to answer pressing questions in cancer biology and clinical oncology. Ongoing work demonstrates that multi-parametric MRI can be used to predict metabolic activity in intact human tumors. Key advancements from prior work are reported in:
- a. Choi C, Ganji SK, DeBerardinis RJ, Hatanpaa KJ, Rakheja D, Kovacs Z, Yang X-L, Mashimo T, Raisanen JM, Marin-Valencia I, Pascual JM, Madden CJ, Mickey BE, Malloy CR, Bachoo R and Maher EA. Noninvasive detection of 2-hydroxyglutarate by magnetic resonance spectroscopy in patients with IDH-mutated malignant gliomas. *Nat Med* 18: 624-629 (2012). PMID: 22281806
 - b. Yang C, Harrison C, Jin ES, Chuang DT, Sherry AD, Malloy CR, Merritt ME and DeBerardinis RJ. Simultaneous steady-state and dynamic ¹³C NMR can differentiate alternative routes of pyruvate metabolism in living cancer cells. *J Biol Chem* 289:6212-6224 (2014).
 - c. Yang C, Ko B, Hensley CT, Jiang L, Wasti AT, Lumata L, Mitsche M, Merritt ME and DeBerardinis RJ. Glutamine oxidation maintains the TCA cycle and cell survival during impaired mitochondrial pyruvate transport. *Molecular Cell* 56:414-424 (2014).

Complete List of Published Work in MyBibliography (Over 200 publications in press or print; h-index 72; total citations > 32,000):

D. Additional Information: Research Support and/or Scholastic Performance

Ongoing Research Support

Howard Hughes Medical Institute <i>HHMI Investigator</i>	DeBerardinis (PI)	09/04/2018 – 08/31/2025
---	-------------------	-------------------------

The goal is to understand the metabolic basis of tissue dysfunction in cancer and pediatric inborn errors of metabolism.

R35CA22044901 National Cancer Institute	DeBerardinis (PI)	09/04/2017 – 08/31/2024
--	-------------------	-------------------------

Metabolic Regulators of Tumor Growth and Progression

We developed novel methods to analyze metabolic flux directly in live human lung tumors and other thoracic malignancies, and are now using them to understand metabolic regulation in human cancer and to identify metabolic liabilities in malignant tissue.

P50CA19651602 (Brugarolas) National Institutes of Health	Brugarolas (PI)	08/01/2016 – 07/31/2021
---	-----------------	-------------------------

The University of Texas Southwestern Medical Center SPORE in Kidney Cancer

This SPORE grant includes a number of complementary projects to understand the biology of kidney cancers and to identify therapeutic opportunities.

Role: PI of a project to identify metabolic biomarkers predicting clinical behavior of solitary renal masses.

R21CA220090-01A1 (Leavey) Leavey (PI) 03/07/2018- 02/28/2020
NIH-NCI CENTER FOR CANCER RESEARCH
Metabolic Profiling in Pediatric Fusion Positive Sarcoma
The goal is to use isotope tracing for in-human analysis of metabolic flux in pediatric sarcomas.
Role: Co-investigator

RP180778 (Morrison) Morrison (PI) 08/31/2018 - 08/30/2022
CANCER PREVENTION & RESEARCH INST OF TX
Metabolic enablers of melanoma progression
The major goal is to establish a clinical workflow to compare metabolism in primary and metastatic melanoma in humans.
Role: Co-investigator

P30CA142543 (Arteaga) Arteaga (PI) 08/03/2010 - 07/31/2020
National Cancer Institute
Cancer Center Support Grant
Goals: The CCSG provides support for senior leadership, scientific research programs, shared resources and other components of the UT Southwestern Comprehensive Cancer Center.
Role: Co-Leader

UL1TR001105 Toto (PI) 09/23/2013– 04/30/2020 NCE
National Center for Advancing Translational Sciences
UTSW Center for Translational Medicine UL1 (KL2/TL1)
The goal is to establish an institution-wide infrastructure for clinical and translational research at UT .
Southwestern.
Role: Co-Director of Core 1.

Completed Research Support

RP170114 (Morrison) Morrison (PI) 12/01/2016 – 11/30/2019
Cancer Prevention and Research Institute of Texas
Mechanisms of melanoma metastasis
To test whether metastasizing melanoma cells exhibit increased dependence on pentose phosphate and malic enzyme pathways relative to primary cutaneous melanomas and whether RUNX3 promotes melanoma metastasis by regulating metabolic changes required for oxidative stress resistance.
Role: Co-investigator.

I-1733 DeBerardinis (PI) 06/01/2016 – 05/31/2019
Welch Foundation
Compartmentation of a redox-balancing metabolic activity in the cancer cell peroxisome
The goal is to produce a detailed understanding of the biochemical basis of a pathway that allows cancer cells to resist oxidative stress during anchorage-independent growth.

RP160089 (CPRIT) DeBerardinis (PI) 03/01/2016 – 02/28/2019
Carbamoyl Phosphate Synthase-1: A new metabolic liability in non-small cell lung cancers
The major goal is to understand how CPS-1 supports tumor growth in non-small cell lung cancer

Howard Hughes Medical Institute DeBerardinis (PI) 11/01/2016 – 10/31/2018
Faculty Scholars Program
The major goals are to further our understanding of metabolic fuels and regulation in human tumors in vivo.
